

Company Description

TrueVault is a data backend for healthcare apps, devices, and sites. TrueVault provides HIPAA compliant storage for protected health information (PHI). Developers build their solutions on top of TrueVault, and TrueVault handles the Technical and Physical Safeguards outlined in the HIPAA Security Rule.

TrueVault is not HIPAA compliant hosting, and TrueVault is not a HIPAA compliant Dropbox. TrueVault provides a simple REST API that can be used to store and retrieve any amount of data at any time from anywhere on the web. All applications need a backend, but setting up a HIPAA compliant data center can be expensive and takes a lot of time. The TrueVault backend-as-a-service saves hundreds of development hours.

TrueVault indemnifies its customers against regulatory fines and the cost of breach remediation. TrueVault will sign a business associate agreement (BAA), and TrueVault has a comprehensive Privacy-Data Breach Insurance policy.

If you would like more information, or to schedule an interview please call (978) 463-2575, or email Kerry Metzdorf at press@truevault.com.
